Brian P. O'Sullivan joins SunFarm Energy as the Director of Sales & Marketing

SunFarm Energy (SFE), a premier provider of Solar Power Systems for the greater Pensacola area, including Escambia, Santa Rosa, Okaloosa, Bay and Walton Counties in Florida, and Baldwin and Mobile Counties in Alabama, is pleased to announce that we have hired Brian P. O'Sullivan to head up the Sales & Marketing efforts for the Company.

As SFE enters 6 years in business, it is anticipating significant growth in the Solar Power and Green Energy industries based on continued technological improvement in performance and reliability, and ever improving cost efficiencies.

Having focused mainly on residential solar power system installations, SFE has reached the point where it's important to grow the commercial installation business footprint. This will allow local businesses to benefit from the unlimited power of the Sun, taking full advantage of a 30% Federal Tax Credit, USDA Rural business grants, and local County programs.

"Brian brings his talent, expertise and wide array of experience, to SunFarm Energy at a perfect time", "While we will still be working with our many residential clients, affording them all the benefits and Federal Tax Credits of a solar energy upgrade, we are looking forward to expanding the commercial side of our business", said Doug Herrick, President of SFE. "We are based in Pensacola, we're proud to contribute to the local economy and have a great reputation! The future is bright, and the sky is truly the limit!"
