June 15 Seminar: Biplane Imaging Assists Treatment of Strokes, Aneurysms

Pensacola-area patients suffering from life-threatening conditions such as stroke, blood clots and aneurysms in the brain, now have access to state-of-the-art, minimally invasive treatment, thanks to Sacred Heart's new biplane angiography system. This amazing technology allows physicians to see inside blood vessels to quickly diagnose blockages or malformations such as aneurysms, and it helps them determine the best means of reaching the target area to provide treatment.

Dr. Lincoln Jimenez, endovascular neurosurgeon with Sacred Heart Medical Group, is the region's only physician with expertise using the biplane imaging system. He will present a free seminar on June 15 at 9:30 a.m. in the Greenhut Auditorium at Sacred Heart Hospital Pensacola, 5151 North Ninth Ave. The seminar is hosted by Sacred Heart's Senior Spirit program and is free, but registration is requested. Register online at www.sacred-heart.org/SeniorSpirit or call 850-416-1620.

About Dr. Jimenez

Lincoln Jimenez, MD, is an experienced neurosurgeon with advanced training in vascular neurosurgery and spinal surgery. He treats many neurologic conditions with both open and endovascular approaches to the brain and vascular system. Dr. Jimenez earned his medical degree in Barranquilla, Colombia and completed his residency training in neurosurgery in San Juan, Puerto Rico. Following his residency, he completed a two-year fellowship in combined cerebrovascular surgery at the University of Cincinnati in Ohio.
