The fingerprint solution launched: Banks can now issue credit cards embedded with miniature scanners, works with existing retail readers

Las Vegas NV - August 1, 2016 – “What amazes so many banks and credit card issuers is the fact that we have embedded a fully functional miniature fingerprint scanner inside a credit card while conforming to industry standards regarding card size and thickness. And, the Banks are able to issue our biometric cards without having to change any existing retail chip card readers or ATM's,” stated SmartMetric's President & CEO, Chaya Hendrick.

The SmartMetric fingerprint solution is the only biometric card in the world that can be used across all card reader platforms including ATM's while conforming to ISO and banking industry standards

Since launching in April, SmartMetric is now actively engaged in talks with credit card issuing Banks around the world. These Banks fully expect the biometric fingerprint protected card to satisfy customer concerns about card fraud, while at the same time mitigating their own card fraud losses.
